

easy to use **variable data printing** for highly personalised documents

PARIS Business is the latest generation of Variable Data Printing software from XLPrint.

PARIS Business includes all of the tools required to design and print Variable Data Print (VDP) applications from your desktop to any printer in your organisation. All output is optimised, so print files are small and efficient. Email, Microsoft fax and ODBC queries are all supported.

PARIS Business provides both an LPD (TCP/IP) service and a Directory Watch (Hot Folders) service so that data files created on a host such as a Unix or AS/400 system, may be sent to the PARIS Business system for formatting and routing. All features provided in the PARIS Desktop are available.

PARIS Business allows you to easily configure highly dynamic and personalised documents with barcodes, autoshapes, data driven charts and smart objects, and create workflows for daily, weekly or regular processing without operational intervention.

PARIS Business is the one-stop variable data printing solution for your business.

10 January 2012

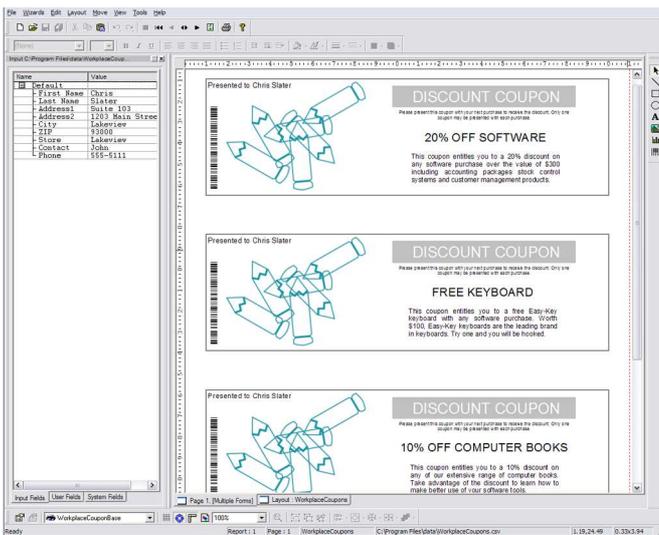

Launchpad

The user-friendly **Launchpad** is the one-stop location from which you can:

- Create workflow rules that allow a data file from a host system to be automatically linked to the correct formatting rules and output destination.
- Print any number of copies of data-less ("Static") Forms (such as leave applications and order forms) to any available Windows printer or device.
- Quickly create new Layouts or Forms using the user-friendly Wizards to guide you.
- Modify existing Layouts and Forms in a completely interactive, WYSIWYG editor.
- Share Layouts, Forms and their resources easily with other users.
- Add output destinations as the system grows.

Designer

The **Designer** will be familiar to any users who have used Microsoft products such as Word and PowerPoint.

The handy toolbars place all of your objects and their properties at your finger-tips. Add and manipulate lines, boxes, circles, complex shapes, text, charts, graphics and barcodes.

Place and move objects anywhere on the page with precision. Turn on your grid to align items. Group and un-group related objects. Zoom in and out. The entire design process is intuitive and fast.

Drag and drop data from the left-hand pane anywhere onto the page. Drag text into text blocks for highly personalised communication. Insert data into barcodes and charts. See the document take shape.

Features at a glance

- Priced by number of output destinations (routes)
- Unlimited prints to each destination
- TCP/IP and Hot Folders
- Familiar and simple user interface
- Preview before print
- Accepts CSV data from any database
- Set up ODBC queries
- Impact printer (line mode) data format support.
- Multi-page PDF import
- Wizards to guide document setup
- Includes a library of Form Templates
- Includes all Avery® label formats
- Email and Fax supported
- Indexed PDF and TIFF output
- Fully colour enabled
- Share applications with other users
- Create data-less forms and print any number of copies
- Print multi-up applications such as coupons
- Mail merge - see result of merge on screen
- Change forms based on conditions in data
- Change paper trays based on conditions in data
- Generates input data driven charts
- Cut and paste text from other Windows applications
- Use any Windows graphic format
- Draw complex shapes
- Print on any paper size
- Print portrait or landscape
- Print on both sides (duplex)
- Direct Smile interface
- Sample pages from the Designer for instant proofing

PC Requirements

PARIS Business will run on standard Windows PCs with the following minimum specifications. (For optimal performance we recommend higher specifications):

- Pentium III® Processor or greater
- 1 GHZ clock speed or greater
- 2 GB free disk space or greater
- Windows 2000/XP/2003/Vista/7®
